

MHR Usage Clinical Considerations

Aged Care Clinical Staff

Enhancing clinical care for Aged Care Clinical Staff - considerations for use of My Health Record

This is for your organisations internal use only

This tool supports Aged Care Clinical Staff to access and share important health information via My Health Record.

Benefits of access to up-to-date important health information via My Health Record

- Informed decision-making
- Minimised test duplication
- Improved continuity of care
- Lower risk of adverse events
- Reduced clinician admin burden and increased efficiency

Uploading Considerations

Documents uploaded by GPs, RN's and NPs to My Health Record can be viewed by the patient and other healthcare providers involved in their care. Other clinicians accessing My Health Record may include pharmacists, hospital physicians and emergency teams, specialists, residential and community aged care nurses, and allied health clinicians. This information may include medical history, medicines history, allergies, immunisation records, MBS and PBS items

Document	When to upload	Considerations
Resident Care Transfer Overview includes: Residential care transfer reason (RTR) Residential health care summary (RHS) Residential care medication chart – Electronic National residential medication chart (eNPMC)	Upon transfer to hospital	Ask your AC Provider/Software vendor when the ACTS feature will be available – Note: A <u>transfer reason</u> will trigger the ability to upload accompanying documentation as part of the health summary in MHR. Residential health care summary (RHS) • NOK Details • Health Insurance details • Religion/Language • Advanced Care Directive/End of Life wishes • Comprehensive Medical Assessment • Pathology & Diagnostic Imaging results • Pre-morbid / usual condition & functioning: cognition, mobility, continence, behaviours, diet, BSL (if applicable)

		Residential care medication chart (eNPMC) Medication chart
